 - Species Rich Grassland
 - Shrub/Scrub Planting
 - Grass Verge
 - Individual Trees
 - Hedge
 - Drystone Wall
 - Otter Fencing
 - Dry Mammal Underpass
 - Indicative Locations of Bat Mitigation

Bat boxes to be placed in existing woodland to offset loss of habitat and severance of commuting routes.

Deciduous woodland to compensate for woodland lost during construction and to reflect surrounding woodland character.

PITLANDIE OVERBRIDGE

Shrub/scrub, mixed woodland and species rich grassland to soften visual impact of cutting, provide visual interest and replacement wildlife habitat.

Species rich grassland to provide visual interest, reflect local flora species and create a habitat for ecological benefit.

Hedgerow with trees to reinforce field boundary and enhance wildlife habitat connectivity.

Existing woodland to be retained.

Mixed woodland planting to replace woodland lost due to construction, provide visual screening to nearby dwellings and wildlife habitat connectivity.

SUDS basin earthworks to be graded out to integrate with surrounding landform.

Mixed woodland and shrub/scrub planting to soften visual impact of earthworks and overbridge and tie in with existing vegetation.

Bat boxes to be placed in existing woodland to offset loss of habitat and severance of commuting routes.

Mixed woodland planting to help integrate junction into surrounding landscape, reduce visual impacts and offset loss of trees due to construction.

Shrub/scrub planting to tie-in with riparian woodland along Ordie Burn.

Shrub/scrub planting to help integrate junction into surrounding landscape, compensate for planting lost due to construction, soften visual impact of cutting slopes and provide wildlife habitat.

TULLYBELTON/
STANLEY JUNCTION

SUDS basin earthworks to be graded out to integrate with surrounding landform.

Shrub/scrub planting and species rich grassland to provide habitat for amphibians and compensate for planting lost due to construction.

Earthworks graded out in order to integrate with surrounding landform and reduce the impact of earthworks.

Tree lines to help offset loss of trees due to construction, tie into existing landscape pattern, reduce visual impact and provide wildlife habitat connectivity. Species to include Oak, Lime and Wych Elm.

Mixed woodland and scrub to reduce visual impact of overbridge approach embankments.

Hedgerows with trees to reinforce field pattern, provide visual separation of A9 and side road and provide wildlife habitat connectivity.

Tree line to increase connectivity between mitigation planting and 5 Mile Wood.

Shrub/scrub planting and species rich grassland provide visual interest, replace planting lost due to construction and provide wildlife habitat connectivity.

Retain existing hedgerow along adjacent side road.

Infill gaps in screen planting.

Shrub/scrub planting to compensate for planting lost due to construction, soften visual impact of cutting slopes and provide wildlife habitat.

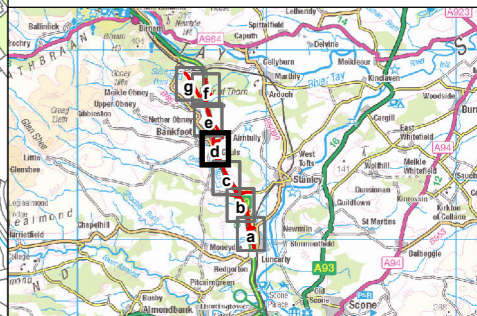

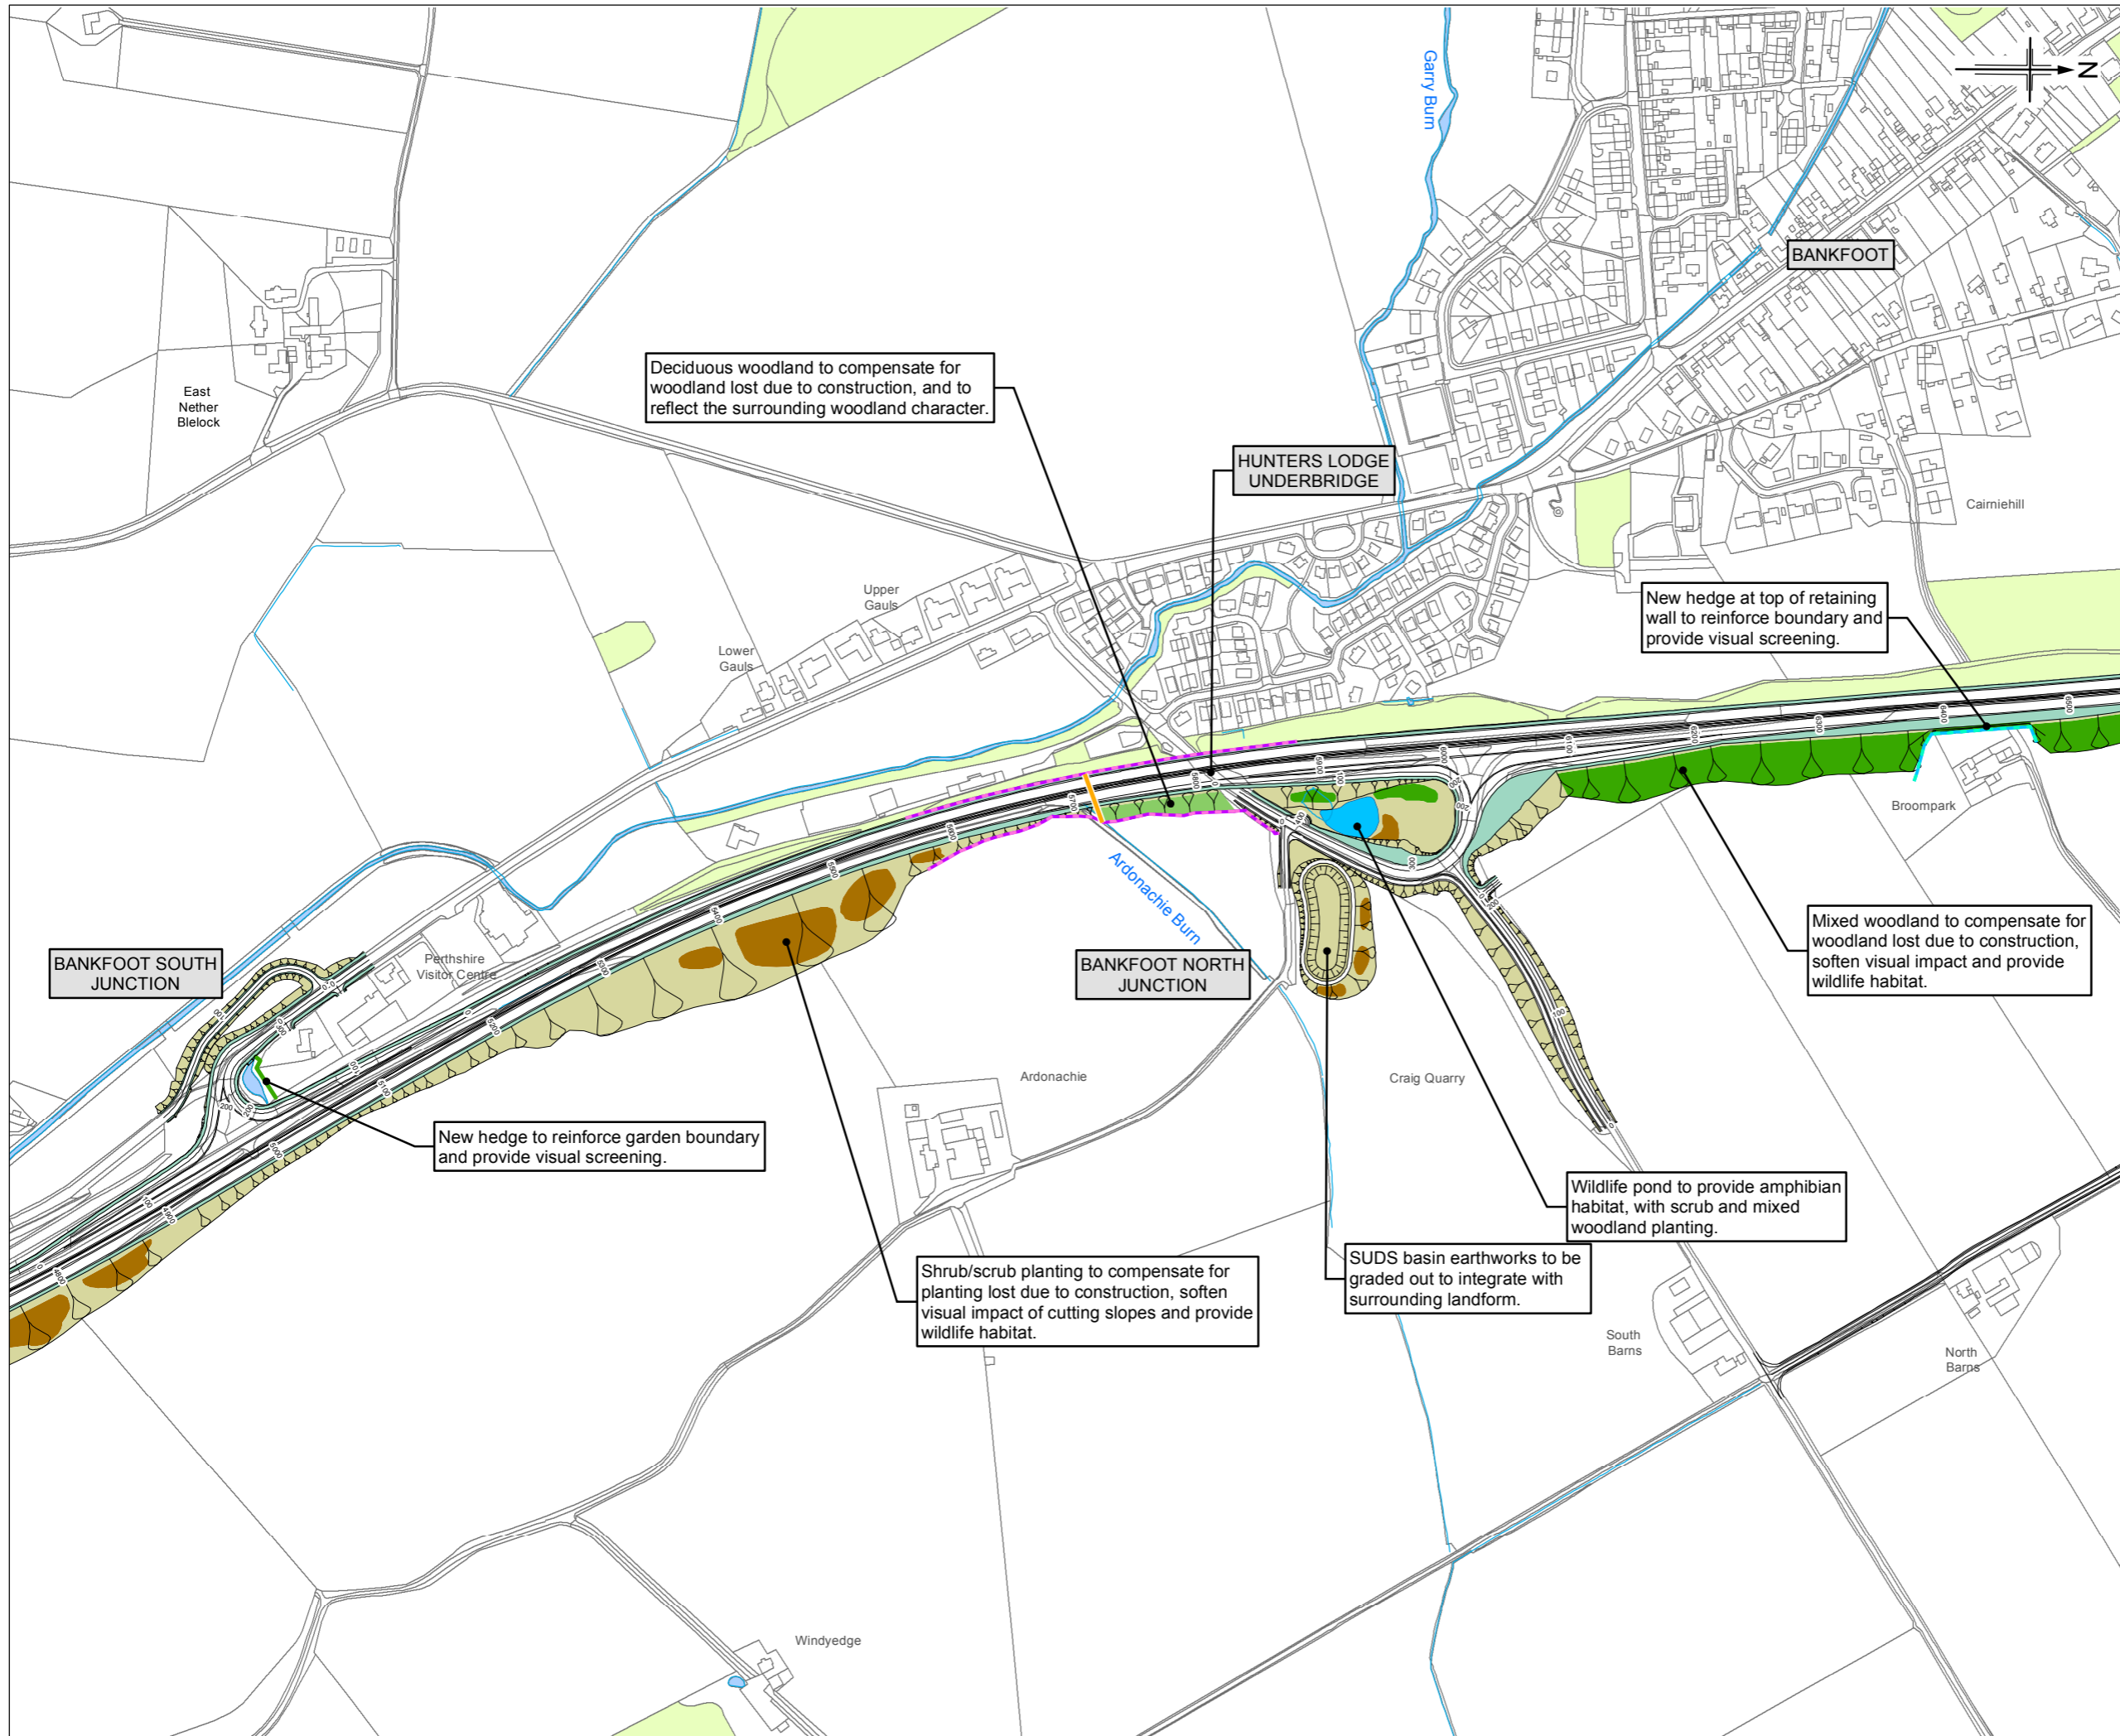

Hedgerows with trees to reinforce field pattern, provide wildlife habitat connectivity and visual screening; will also help increase integration with existing tree line.

Existing woodland retained for ecological habitat improvement and to preserve bat commuting routes.

Mixed woodland planting to tie-in with existing woodland, soften visual impact of embankments and compensate for loss of woodland habitat due to construction.

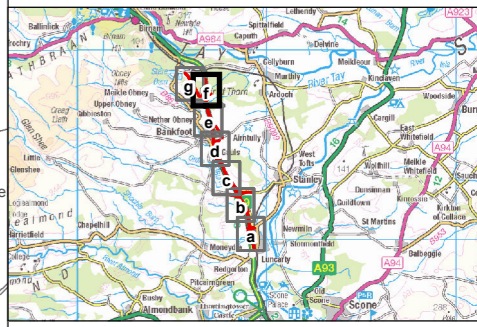

GELLY OVERBRIDGE

Drystone dyke to provide habitat for reptiles and invertebrates and tie in with existing character of Murthly Castle GDL.

SUDS basin earthworks to be graded out to integrate with surrounding landform.

Mixed and scrub woodland planting to integrate new SUDS basin into the landscape and provide wildlife habitat.
